

DIABETES SERIES

Diagnosing and Classifying Diabetes for Primary Care

Tuesday 19 October 2021

19.00 - 20.00

Chaired by Dr Nimish Shah, GP CPD Lead for South Wales

Overview

Diagnosis of type 1 diabetes is most often done when presenting with osmotic symptoms. A majority of type 2 diabetes are also recognised on routine testing. There may be some complex scenarios where the type of diabetes cannot be established on first visit. The diagnosis will impact on the choice of interventions made. The increased awareness of rare types like genetic diabetes, if diagnosed right, can make huge difference to patient outcomes.

We will discuss case-based scenarios with diagnostic criteria for diabetes and when to consider rare forms of diagnosis. Join us for this webinar to find out more.

Speaker: Dr Vinay Eligar, Consultant in Diabetes and Endocrinology and Deputy Clinical Lead for Diabetes, Cardiff & Vale UHB.

Designed for: GPs. Other allied medical professionals like Pharmacists and ANPs are very welcome to attend.

Format: A presentation followed by the opportunity to direct questions to the expert speaker during the webinar.
