- [x] Domain 3 - Communication, Partnership and Teamwork
- [ ] Domain 4 - Maintaining Trust
- [ ] Teaching, Research, Leadership and Innovation

Date and title of event ℹ

Erroneous prescribing of Novel Oral Anticoagulant (NOAC) to patient following Hip operation - See attached

Description ℹ

See attached Significant Event Analysis (SEA) document

Outcome ℹ

See attached Significant Event Analysis (SEA) document

Reflection and action ℹ

See attached SEA document.
- The SEA meeting was viewed as a success largely because early distribution of the SEA documentation meant that colleagues came to the meeting well-prepared and with several ideas on how to prevent a similar occurrence. There was general recognition that the current process for

actioning hospital medication discharge information left us vulnerable to similar mistakes and any one of us could easily have made this error on something similar. Because of this it was agreed that all drug discharge letters of this nature should be viewed by the on-call doctor and the information

should be made available while sitting at a computer terminal so that the doctor could view all information available related to the case. Furthermore, if there was insufficient information on which to make a decision the on-call doctor would liaise with the prescribing clerk to ensure that the ward was rung and further information requested. This process will be reviewed in a year to assess its effectiveness and acceptability to all concerned.

⌄ Appraisal Attributes

Information Attributes:

- [x] Keep clear accurate and legible records
- [x] Maintain your professional performance
- [x] Put into effect systems to protect patients and improve care
- [x] Respond to risks to safety
